

SEAtS Software

SEAtS – Getting Started With SEAtS Data Hierarchy

2024/2025

Agenda

- What is meant by 'Data Hierarchy'
- Why is it important that a hierarchy is established?
- Key Considerations

What is meant by 'Data Hierarchy'

- The Data Hierarchy in SEAtS refers to the different levels within an institutions teaching structure.
- SEAtS allows for 5 levels within the data hierarchy. Faculty being the highest level with Module being the lowest level.

Catalog Hierarchy Level	SEAtS Terminology	Fields in the Data Interface File	Mandatory	Import inclusion
1	Faculty	Faculty_ID, Faculty_Name	No	Student
2	School	School_ID, School_Name	Yes	Student & Timetable
3	Programme	Programme_ID, Programme_Name	No	Student
4	Course	Course_ID, Course_Name	Yes	Student & Timetable
5	Module	Module_ID, Module_Name	Yes	Student & Timetable

- A students association to these levels is established through the import of Student and Timetable data
- All the levels can be renamed to match naming conventions at an institution. For example: 'Course' can be easily renamed to 'Route'.

Why the Data Hierarchy is Important

- The data hierarchy is important as it shapes the data within SEAtS.
- In order to be able to report effectively on the data that SEAtS captures (whether it be attendance or engagement) a students association to the different levels needs to be accurate.
- As an example, you have the ability to drive reports based on specific Courses. If a student has been wrongly associated to a course, or perhaps not associated when they should have been this will cause data integrity issues.
- A well defined hierarchy is also important if the security model is to be implemented. This is where the students users can see in the system can be limited by the different levels.

Key Considerations when defining the data hierarchy

The below are some things to consider when defining the data hierarchy

- How many levels are part of the teaching hierarchy at the institution?
- Do the teaching levels match directly to the default SEAtS levels?
- Do any of the teaching levels need to be renamed within SEAtS?
